# Take control of Onshore Accommodation Management

**i**logistics  
CAMP

## What is iLogistics?

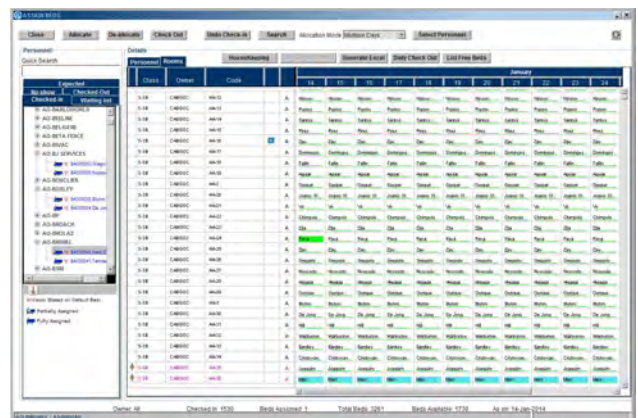

iLogistics is a multi-modal logistics management system designed to manage logistics operations pertaining to exploration and production (upstream) operations of oil and gas companies. Brought to you by IBS, a leading supplier of Travel, Transportation and Logistics solutions for global leaders, iLogistics covers the end-to-end operations of the upstream logistics value chain.

## What is iLogistics Camp?

iLogistics Camp module provides end to end onshore accommodation management that puts you in total control of onshore operations. It powers your camp management functions through a host of features catering to advanced visibility, effective capacity utilization and housekeeping management for owned as well as contractor camp facilities.

## Key Benefits

- ✓ Improves visibility into accommodation availability
- ✓ Increased utilization of owned/leased facilities
- ✓ Significantly improves the ability to forecast future accommodation capacity

*iLogistics Camp ensures easy coordination of bed allocations across multiple camps/buildings through easy to use graphical interface*

*"The camp management system integrated with journey management functionalities facilitates end-to-end management of people movement and accommodation through a single system."*

## Camp Manager

## iLogistics Aviation and the Oil and Gas Industry

iLogistics Aviation module enables efficient planning, execution and monitoring of aviation operations resulting in improved asset utilization. An easy to use graphical interface and integration with real time tracking devices results in improved safety and visibility of operations.

**Improved fleet utilization:** A dashboard view of pax reservations, flight schedules and availability of aviation assets enables the logistics manager to efficiently utilize the expensive resources. The system allows sharing of seats between departments and operators increasing seat utilization & reducing per seat cost.

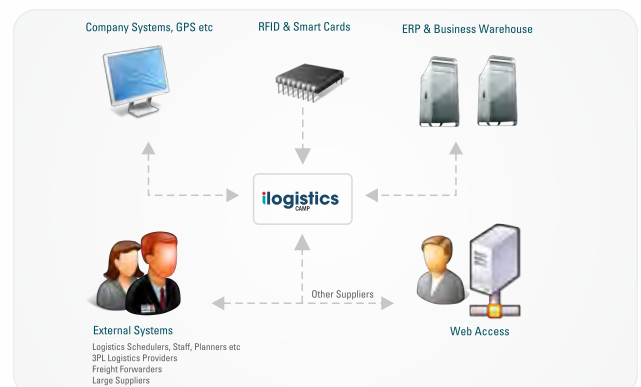

**Effective management of last minute changes:** Last minute flight/ passenger changes are effectively managed without disrupting the day's plan. Features like waitlisting and priority based automatic seat allotments with real-time SMS/ email alerts ensure quick and efficient decision making thus reducing costs associated with no-show and bumped pax.

**Increased productivity:** Automatic checks for HSE compliance, resource/ pax certifications reduces redundant and time-consuming manual verifications. Web/ mobile booking, kiosk check-in and online manifest enables seamless, end-to-end information flow resulting in increased productivity and improved turn around times.

**Safe journey management:** Adherence to HSE compliance is ensured by a configurable rule engine that performs travel validations through all legs of a passenger's journey. iLogistics complies with "TSA No Fly List", drug tests and other aviation people movement regulatory restrictions for safe travel.

**Process Standardisation:** The system is architected to support global standardization of processes across geographies, while retaining the ability to meet specific local regulations. Global KPIs provide enhanced operational visibility for key stakeholders to strategically influence business direction.

## Integration Capabilities

Transformational IT Solutions for Travel, Transportation and Logistics
